

LIFT-1003 – 4.8 Assignment: Creating Multiple-Choice Test Items

Course Outline:

Course Learning Outcome: Students will demonstrate understanding of enterprise server administration concepts, including Active Directory, authentication, secure administration practices, and server management.

Learning Step: Create multiple choice test items that accurately assess learner knowledge and understanding of server administration and security concepts.

Quiz: Summative Assessment

Instructions: Please choose the best answer from the options listed below. Then review the answer key.

Question 1

In an enterprise Windows environment, a system is required to centrally manage user accounts, control access to network resources, and authenticate users when they sign in to on-premises applications. Which service fulfills this role?

- a. Active Directory Domain Services (AD DS)
- b. Domain Name System (DNS)
- c. Microsoft Azure Virtual Network
- d. Dynamic Host Configuration Protocol (DHCP)

Correct Answer: a

Question 2

A system administrator wants to reduce the attack surface of a Windows Server installation by removing the graphical user interface while keeping full server functionality. Which installation option should be selected?

- a. Windows Server Datacenter
- b. Windows Server Standard
- c. Server Core
- d. Remote Access Server

Correct Answer: c

Question 3

An organization requires administrators to perform all privileged tasks from a secured and isolated machine to reduce the risk of credential theft and malware exposure. What is this administrative security practice called?

- a. Jump Server
- b. Bastion Host
- c. Privileged Access Workstation (PAW)
- d. Remote Administration Server

Correct Answer: c

Question 4

Before allowing a user to upload a file to a server, the system verifies the file type and size on the server itself, even if client-side checks already exist. What is the primary reason for this approach?

- a. To improve upload performance
- b. To enhance visual consistency of the form
- c. To prevent malicious or unsupported file uploads
- d. To eliminate the need for user authentication

Correct Answer: c

Answer Key

- 1. a
- 2. c
- 3. c
- 4. c
