

What I Learned

I learned that reconciliation is a lifelong process, not a single event.

Through the Reconciliation Education courses from the First Nations University of Canada, I now understand more about Indigenous history, traditions, and perspectives.

I learned how to give a land acknowledgment and why it is important to show respect to Indigenous Nations.

I also learned about the Truth and Reconciliation Commission Calls to Action (#62–65) and how education plays a key role in healing and change.

I now know more about Indigenous ways of learning, such as storytelling, reflection, and sharing circles, and how these can be used in the classroom.

What I Still Need to Learn

I still need to learn how to use Indigenous teaching methods in my technical courses, such as CNET 184 and CWEB 280.

I want to learn more about how to include storytelling or community based examples in lessons about networking and programming.

I also need to learn about the proper protocols for inviting Indigenous Knowledge Keepers to speak in class.

I plan to keep learning by joining workshops, attending events like Orange Shirt Day, and meeting with colleagues who have experience with Indigenization.

How I Will Apply My Learning

I will update my course materials to include Indigenous examples and voices.

I will begin class with a land acknowledgment and short reflection on respect and community.

I will use interactive learning activities like “Think-Pair-Share” and “Two Truths and a Lie” to connect cultural learning with technical skills.

I will share my learning with other instructors and encourage them to use resources such as the Knowledge Container and the Four Seasons of Reconciliation.

I want my teaching to support respect, inclusion, and shared learning for all students.
