CMPT 145 01 Principles of Computer Science (CRN:41442)

Debasish Chakroborti

Role: Lecture (USask Core)

USask Core Open-Ended Questions

Please comment on the overall quality of the *instruction* provided by Debasish Chakroborti in this course.

Comment

The quality of instruction in this course was thoughtful and earnest, especially given that the professor is early in his teaching career. He demonstrated transparency about areas where he was still developing and made consistent efforts to engage students through class participation and prompt responses to questions. His explanations were clear and accessible, and he showed flexibility with accommodations when needed. While some aspects of delivery could be refined over time, his commitment to student learning and openness to feedback stood out positively. Overall, the instruction quality was above average for a new instructor, and I believe with continued experience, he will become an outstanding educator.

The lectures feels by the books, scripted almost. Everything day feels standard like an 'average' lecture. The in class quizzes are much more engaging than the online versions

Please comment on any opportunities you had to develop and demonstrate subject specific skills in this course.

Comment

This course provided multiple opportunities to develop and demonstrate key subject-specific skills, including problem-solving, critical thinking, and application of core computer science concepts. Assignments and quizzes encouraged practical engagement with the material, fostering both individual understanding and collaborative learning. The mix of in-class activities and assessments helped reinforce theoretical knowledge while promoting analytical skills essential to the discipline. However, variability in class attendance sometimes limited the effectiveness of class participation components. Overall, the course structure supported skill development appropriate for an 100-level computer science class

Please comment on the overall quality of your *learning experience* in this course.

Comment

This course made an effort to center participation and engagement, and the overall structure encouraged questions, student input, and flexibility. That said, a lack of engagement from many students significantly impacted the classroom environment. I believe that efforts to create a supportive, interactive space were sometimes undermined by student disengagement or unprofessional commentary outside class settings. This is not specific to this course, but seems to be a broader cultural issue in some lower-year CS cohorts, and is worth the department's attention.
