August 2026

1. Teaching Philosophy

My teaching is grounded in experiential learning, inclusive pedagogy, and systems thinking. Students learn computing most effectively when they connect theory with hands-on practice, critical reflection, and real-world applications. My goal is to help learners become ethical, adaptive professionals who can design reliable, maintainable, and socially responsible systems.

I treat the classroom as an active, collaborative space. Students are co-creators of knowledge who question, experiment, and learn with peers. I use outcomes-based design, staged assignments, and structured formative feedback so learners understand both how systems work and how to improve them thoughtfully.

2. Teaching Experience

As an Instructor in the School of Computing and Digital Innovation at Saskatchewan Polytechnic (Regina Campus), I teach and design materials across Computer Systems Technology and Cloud Computing & Blockchain, including systems administration, networking, web applications, cloud platforms, DevOps, and project-oriented courses. I have also rewritten course and lab materials for most courses I teach.

As Sessional Lecturer at the University of Saskatchewan (Spring/Summer 2025), I taught CMPT 145.3 Principles of Computer Science (two sections), with full course responsibility and guidance of three teaching assistants. Earlier, as a Teaching Assistant / Student Assistantship (2017–2024), I supported CMPT 214, 145, 370, 280, 270, 141, and Database Management Systems.

As Lecturer in CSE at Khulna University (2013–2017; later on study leave), I taught Structured Programming, Software Development Project, Advanced Programming Laboratory, and Software Engineering and Information System. I also taught Computer Science courses for the BA program at North Western University (2014–2016) and ICT courses for high school teachers at HSTTI, Khulna (2014–2016).

3. Teaching Practices and Pedagogical Innovation

Learn by doing. Courses center on labs, design projects, and authentic workflows—for example deploying cloud services, building secure web applications, practicing version control and testing pipelines, and completing milestone-based team projects.

Inclusive and culturally responsive pedagogy. Completing the Reconciliation Education Certificate and Four Seasons of Reconciliation informs transparent expectations, multimodal resources, equitable access to assessments, and a classroom culture centered on respect and collaboration.

Contemporary tools and AI-assisted development. I keep materials current with CI/CD practices, cloud and systems tooling, and responsible use of AI-assisted developer workflows, so students build both conceptual depth and professional readiness.

4. Mentorship and Student Engagement

Mentorship is an extension of teaching. I have mentored an M.Sc. student on software backporting and quality analysis (co-authored publications), supervised undergraduate summer research students, guided teaching assistants, and supported student presentations at venues such as the SOAR Symposium. Mentorship emphasizes self-directed learning, ethical reasoning, and reflective practice.

5. Teaching Impact

My long-term commitment is to prepare students who are thoughtful, responsible, and technically strong. Through active learning, inclusive pedagogy, curriculum design, and sustained instructional development (including LIFT and New Instructor Orientation), I aim to create classrooms that are intellectually engaging, welcoming to diverse learners, technically rigorous, and grounded in practice.
